## CLASSICAL MECHANICS AND DYNAMICAL SYSTEMS

### **classical mechanics and dynamical pdf**

Classical mechanics describes the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars and galaxies.. If the present state of an object is known it is possible to predict by the laws of classical mechanics how it will move in the future (determinism) and how it has moved in the past (reversibility).

### **Classical mechanics - Wikipedia**

Hamiltonian mechanics is a theory developed as a reformulation of classical mechanics and predicts the same outcomes as non-Hamiltonian classical mechanics. It uses a different mathematical formalism, providing a more abstract understanding of the theory. Historically, it was an important reformulation of classical mechanics, which later contributed to the formulation of statistical mechanics ...

Abstract: Let  $g$  be a smooth expanding map of degree  $D$  which maps a circle to itself, where  $D$  is a natural number greater than 1. It is known that the Lyapunov exponent of  $g$  with respect to the unique invariant measure that is ...
