VALUING ECOSYSTEM SERVICES METHODOLOGICAL ISSUES AND CASE STUDIES

valuing ecosystem services methodological pdf

Nature is perceived and valued in starkly different and often conflicting ways. This paper presents the rationale for the inclusive valuation of nature's contributions to people (NCP) in decision making, as well as broad methodological steps for doing so.

Valuing nature's contributions to people: the IPBES

INTRODUCTION. A recent paper by Díaz et al. (2018a) presented "nature's contributions to people," a conceptual framework developed within the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES). The authors wrote that it could nurture a paradigm shift from the concept of ecosystem services.

Ecology and Society: Welcoming different perspectives in

Natural capital is the world's stock of natural resources, which includes geology, soils, air, water and all living organisms. Some natural capital assets provide people with free goods and services, often called ecosystem services. Two of these (clean water and fertile soil) underpin our economy and society and make human life possible.

Natural capital - Wikipedia

Summary. Conserving natural lands, working farms and forests, and the creation of trails and parks are often viewed in terms of their costs. Yet these often generate financial returns, both to governments and individuals, and create significant cost savings to governments in the provision of services.

part of science. Although humans are part of nature, human activity is often understood as a separate category from other natural phenomena.

Nature - Wikipedia

This paper presents a meta-analysis of existing research related to the economic valuation of the external effects of hydropower. A database consisting of 81 observations derived from 29 studies valuing the non-market impacts of hydropower electricity generation is constructed with the main aim to quantify and explain the economic values for positive and negative hydropower externalities.

The journal is concerned with extending and integrating the understanding of the interfaces and interplay between "nature's household" (ecosystems) and "humanity's household" (the economy). Ecological economics is an interdisciplinary field defined by a set of concrete problems or challenges related to governing economic activity in a way that promotes human well-being, sustainability, and justice.
