Striving to reach higher productivity in woodworking processes has led to increased efficiency and automation. A higher degree of automation demands a larger investment, and therefore production downtime will be even more costly.

Fire protection in the Woodworking industry

A router is a hand tool or power tool that a worker uses to rout (hollow out) an area in relatively hard material like wood or plastic. Routers are mainly used in woodworking, especially cabinetry. Routers are typically handheld or fastened cutting end-up in a router table. The hand tool type of router is the original form. It is a specialized type of hand plane with a broad base and a narrow ...
