MONITORING the FUTURE

In summary, the Sox2+ QNP pool was smaller in the anterior-mid DG of older people and comprised approximately 1,000 cells per DG region (anterior, mid, or posterior), while nestin+ and Sox2/nestin+ INP type I-II cells, in the range of thousands per DG region, were not fewer in older humans in anterior, mid, or posterior DG.

Human Hippocampal Neurogenesis Persists throughout Aging

Substance use disorders among adolescents can impede important developmental milestones, including developing autonomy, forming intimate interpersonal relationships, and general integration into adult society. We examine a variety of aspects of adolescent substance use in this fact sheet.

NCCP | Adolescent Substance Use in the U.S.

Adolescence (from Latin adolescere, meaning 'to grow up') is a transitional stage of physical and psychological development that generally occurs during the period from puberty to legal adulthood (age of majority). Adolescence is usually associated with the teenage years, but its physical, psychological or cultural expressions may begin earlier and end later.
